

Tyler Korte is the Vice President of Marine Operations at Blue Ocean Mariculture. Tyler started his career as a marine ecologist working with various non-profit organizations, including the Monterey Bay Aquarium, Catalina Island Marine Institute, and the University of Hawaii, where he promoted ocean conservation through research and education. In 2008, Tyler began working with commercial finfish producers focused on sustainable offshore farming. Tyler has dedicated the last decade to helping develop environmentally friendly farming practices in the offshore waters of Panama and Hawaii. Tyler has a degree in marine biology with a focus on coastal ecology from Brown University and has worked with the University of New South Wales, the University of Hawaii and the University of Florida on coral ecology and invasive species assessment projects.
